

Live File Backup by Infonautics GmbH Switzerland

The user-friendly real-time/live backup program for your home and office PC!

Purpose

Regular daily, weekly and monthly backups provide often outdated data when a data recovery is needed. Since these backups do not include the just created documents of the last hours most valuable work will be lost. While working, data often get lost due to unintended deletion or accidental overwriting of a document, because of a hardware failure or even a bug. By saving the data continuously in the background »Live File Backup« provides at any time the requested file as well as its corresponding older versions (generations). Valuable work will never get lost again.

Function

While you are working »Live File Backup« saves continuously your important data to any storage media requested; internal and external drives, USB memory sticks, network drives (also universal naming convention paths UNC), network attached storage (NAS), as well as to Internet or Intranet FTP server.

The number of file generations and for how long these file copies should be kept can be chosen freely. At any time, »Live File Backup« enables an easy data recovery of any lost or corrupted file and its corresponding older versions (generations). If requested, the backup copies can be encrypted. This can be useful if for example the backup files should be stored on a drive accessible by other people too.

System Requirements

Operating system: Microsoft Windows® 98/2000/XP/Vista

Main memory RAM: about 8 MB

Program space on disk: about 4 MB

Backup space on storage media: of any choice (for files and file generations)

Supported drives: internal and external hard disks, USB memory stick, network drives (also universal naming convention paths UNC), network attached storage (NAS), as well as Internet or Intranet FTP server (fast internet connection provided)

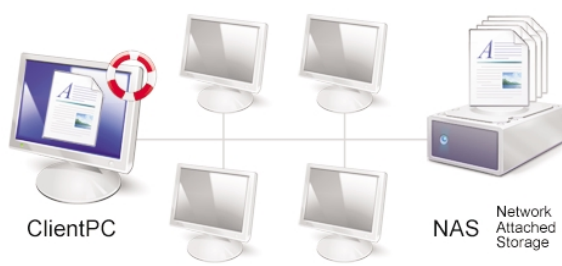

Case Studies

Single-user workstation with attached external hard-disk

Data backup with »Live File Backup« to an external hard-disk attached directly to the PC. This solution is very fast installed and provides a good and individual protection of the current work.

Client PC in a network with NAS (Network Attached Storage)

Data backup with »Live File Backup« to a network attached storage or hard-disk (Windows network or by FTP). NAS (Network Attached Storage) offers sufficient space for the live backup of several clients. Each client has his own backup directory on the NAS device.

Client PC in a network with file server

Data backup with »Live File Backup« to a server in the network (Windows network or by FTP). For each client PC with »Live File Backup« installed an own backup directory will be set up on the (file) server.

Laptop with USB memory stick

Data backup with »Live File Backup« to an USB memory stick plugged into the laptop. This solution provides a good protection of your current work even on the road.

Program Features

- **Run the backup program automatically when Windows® starts** and you do not have to think about it anymore. Your data will be backed up automatically in the background.
- **Start and stop the backup manually.**
- **Flexibility in setting the data sources;** internal and external drives, USB memory sticks, network drives (also universal naming convention paths UNC).
- **Subdirectories can be included or excluded.**
- **Data filter** in order to include or exclude certain file types.
- **Data compression** in order to save disk space on storage media.
- **Data encryption by password** to protect backed up data.
- **Flexibility in choosing backup location;** local or external drive, USB memory stick, network drives (also universal naming convention paths UNC), network attached storage (NAS), as well as Internet or Intranet FTP server (fast internet connection provided).
- **Easy restoration** of saved data to the original or any other location. The backup as ZIP file format as well as the clear directory structure enable data recovery with the Windows®-Explorer only, even without the original backup software.
- **Possibility to filter the backed up data** in order to select it by name and date.
- **Automatic "cleaning-up"** feature in order to save space on storage media by defining number of backup copies and number of days the backups should be stored.
- **Manual "cleaning-up"** of storage media by deleting files by size and age.
- **Shortest backup interval adjustable.**
- **Possibility to define the number of backup versions** / generations of the same file (1-999 versions).
- **Storage time of backups** can be defined (1 - 999 days).
- **Maximum file size of backups** can be defined.
- **Detailed log** of backed up files.
- **Monitor** shows constantly current processing of Live File Backup.
- **Automatic update** for an easy updating of the program via Internet (only when requested and confirmed by user).
- **Straightforward help system** with the possibility to get detailed information about each function.
- **Extensive manual** and online help in German and English.

Shareware

»Live File Backup« is shareware, i.e. you may test the software thoroughly free of charge before purchase. After the testing phase and for a regular use of »Live File Backup« software a licence key has to be purchased.

Download and licence see: <http://www.livefilebackup.com>

Licence Types

Single

The software can be installed as single user licence on 1 PC. The licence refers to the name of the user. For any further PC an additional licence is needed.

Price: € 35.- / \$ 49

Business

The software can be installed on up to 10 PCs maximum within the same company. The licence refers to the name of the company.

Price: € 140.- / \$ 196

Corporate

Within the same company the program can be installed on an unlimited number of PCs. The licence refers to the name of the company.

Price: € 315.- / \$ 441

The software is available in the languages English and German.
